Uterus, right ovary (2.0 x 1.0 x 1.0 cm) with 7.0 cm  
segment of  
right fallopian tube, and left ovary (2.0 x 1.0 x 1.0 cm)  
with 5.0  
cm segment of left fallopian tube together weighing 205.0  
grams;  
tissue from the omentum (biopsy, 1.3 x 1.0 x 0.4 cm);  
separately  
submitted portion of omentum (34.0 x 24.0 x 2.0 cm); right  
and left  
pelvic lymph nodes; right and left para-aortic lymph nodes  
above and  
below the inferior mesenteric artery; right gonadal  
vessels (4.5 cm  
in length); left gonadal vessels (6.0 cm in length); and  
staging  
biopsies [right colic gutter, right pelvic sidewall, right  
diaphragm, cul de sac, left colic gutter, left pelvic  
sidewall,  
small bowel serosa, large bowel serosa, bladder  
peritoneum, small  
bowel mesentery, and large bowel mesentery (all ranging in  
size from  
0.2 cm to 1.5 cm in greatest dimension)].

**DIAGNOSIS:**

Uterus, bilateral ovaries, and fallopian tubes; radical  
hysterectomy  
and bilateral salpingo-oophorectomy: FIGO grade III (of  
III) serous  
carcinoma is identified involving an endometrial polyp  
(4.0 x 3.0 x  
3.0 cm) in the upper endometrial cavity. There is a  
submucosal  
leiomyoma in the lower uterine segment. The surface  
endometrium is

UUID:5D25FD0B-EEE9-435C-82C7-BC44B0758A14  
TCGA-D1-A2G7-01A-PR

Redacted

diffusely involved by serous carcinoma. Random sections of the endometrium show a mixture of serous carcinoma and FIGO grade I (of III) endometrioid carcinoma. There is focal superficial invasion (0.2 cm, total wall thickness, 2.5 cm). There is no lymphovascular space involvement. The endocervix is uninvolved. The cervix is unremarkable. There is a 1.5 cm simple cyst in the left ovary. The right ovary is atrophic. The fallopian tubes are atrophic.

Omentum, biopsy: Negative for tumor.

Omentum, omentectomy: Negative for tumor.

Lymph nodes, right pelvic, excision: Multiple right pelvic lymph nodes (12 external iliac, 1 internal iliac, 6 common iliac, 8 obturator) are negative for tumor.

Lymph nodes, left pelvic, excision: Multiple left pelvic lymph nodes (7 external iliac, 1 internal iliac, 4 common iliac, 10 obturator) are negative for tumor.

Lymph nodes, right and left para-aortic above and below the inferior mesenteric artery, lymphadenectomies: Multiple para-aortic lymph nodes above the inferior mesenteric artery (3 right, 7 left) are negative for tumor. Multiple para-aortic lymph nodes below the inferior mesenteric artery (6 right, 7 left) are negative for tumor.

Gonadal vessels, left and right, excision: The left and right gonadal vessels are negative for tumor.

Soft tissue; right colic gutter, right pelvic sidewall,  
 right  
 diaphragm, cul de sac, left colic gutter, left pelvic  
 sidewall,  
 small bowel serosa, large bowel serosa, bladder  
 peritoneum, small  
 bowel mesentery, and large bowel mesentery; staging  
 biopsies:  
 Negative for tumor, all sites.
