Uterus, right ovary (3.1 x 1.5 x 1.1 cm) with 9.0 cm
segment of
right fallopian tube, and left ovary (2.8 x 1.7 x 1.1 cm)
with 9.0
cm segment of left fallopian tube together weighing 125.0
grams,
tissue from the bladder peritoneum (4.1 x 1.6 x 0.2 cm),
left colic
gutter (aggregating 2.3 x 1.9 x 0.5 cm), right colic
gutter
(aggregating 3.9 x 2.4 x 0.3 cm), tissue from the
diaphragm (2
pieces aggregating 0.5 x 0.4 x 0.4 cm), small bowel
mesentery
(biopsy, 0.4 x 0.3 x 0.2 cm), portion of omentum
(aggregating 15.0 x
6.5 x 2.8 cm), appendix (8.3 x 0.4 cm), right and left
pelvic lymph
nodes, right and left para-aortic lymph nodes.

DIAGNOSIS:

Uterus, total abdominal hysterectomy: High grade serous carcinoma
forming a mass (4.8 x 4.7 x 3.6 cm) arising in association
with an
endometrial polyp. The tumor invades throughout the
thickness of
the myometrium to focally involve the uterine serosa.
Lymphovascular invasion is present. The cervix is
unremarkable.

Ovary, left, oophorectomy: Endometrioma with focal
hyperplasia (1.1
cm).

Ovary, right, oophorectomy: No diagnostic abnormalities.

UUID:778F9F58-841E-48F3-86EA-7CF58463808B
TCGA-D1-A16G-01A-PR

Redacted

Fallopian tubes, right and left, salpingectomies: No
diagnostic
abnormalities.

Soft tissue, bladder peritoneum, excision: Involved by
high grade
serous carcinoma.

Peritoneum, right and left colic gutter, biopsies:
Negative for
tumor. Frozen section histologic interpretation performed
by:

Peritoneum, diaphragm, biopsy: Negative for tumor. Frozen
section
histologic interpretation performed by:

Mesentery, small bowel, biopsy: Negative for tumor.
Frozen section
histologic interpretation performed by:

Omentum, omentectomy: Involved by high grade serous
carcinoma.
Frozen section histologic interpretation performed by:

M.D.

Appendix, appendectomy: Fibrous obliteration of appendix.
Frozen
section histologic interpretation performed by:

Lymph nodes, right pelvic, excision: Multiple right
pelvic lymph
nodes (1 internal iliac, 8 external iliac, 2 common iliac
and 6
obturator) are negative for tumor. Frozen section
histologic
interpretation performed by:

Lymph nodes, left pelvic, excision: Multiple left pelvic
lymph
nodes (3 external iliac, 6 common iliac and 4 obturator)
are
negative for tumor. Frozen section histologic
interpretation
performed by:

Lymph nodes, right para-aortic, excision: Multiple right para-aortic lymph nodes (4 above and 7 below the inferior mesenteric artery) are negative for tumor. Frozen section histologic interpretation performed by:

Lymph nodes, left para-aortic, excision: Multiple left para-aortic lymph nodes (4 above the inferior mesenteric artery) are negative for tumor. Specimen labeled as "left para-aortic lymph nodes below the inferior mesenteric artery" revealed no nodal tissue.

This final pathology report is based on the gross/macroscopic examination and frozen section histologic evaluation of the specimen(s).
